John Noble are specialists in commercial property and event lighting

Planning electrical installations for events is key to a successful event going without a hitch. Make sure you contact John Noble Electrical well in advance of your event to ensure our availability to manage your event project.

Commercial Wiring Services

For many years, John Noble Electrical Contractors have served the people in event management and commercial properties. We have a team of security cleared electrical engineers that are experience in dealing with all electrical wiring and fuse boxes. If you are experiencing problems such as a fuse box tripping every time you put the spotlights or display cabinets on then give us a call. We will investigate the source of the electrical problem and recommend the best solution.

Earthing Upgrades

If your event or commercial building is not earthed correctly, visitors could get electrocuted. Without an earth connection, the safety switches will not work and an

electrical fault could cause an event venue or appliances to become 'live' as the current flows to earth. Earth stakes often do not work because the earth stake is corroded or damaged. Don't risk lives by having a faulty earth at your event. It is best to get your building checked by a qualified electrician.

External Lighting Systems

There are many lighting products to choose from. If you are in doubt about installing your new lights for your event or hospitality property, call us to get advice on installation. If you are thinking about getting external lighting for your event then you may need special wiring to the outside of your building. Whatever lighting you are installing or removing from your event venue it is always advisable to talk it through with a qualified electrician. This could save you time and money.
