John Noble are specialists in outdoor and indoor lighting and heating

If you live in Central Scotland and need electrical lighting or repairs or need a more efficient heating system then talk to John Noble Electrical Contractors about a site survey.

Domestic Wiring Services

For many years, John Noble Electrical Contractors have served the domestic sector. We have a team of security cleared electrical engineers that are experience in dealing with all residential wiring and fuse boxes. If you are experiencing problems such as a fuse box tripping every time you put the oven on then give us a call. We will investigate the source of the electrical problem and recommend the best solution.

Earthing Upgrades

If your home is not earthed correctly, your family or visitors could get electrocuted. Without an earth connection, the safety switches will not work and an electrical fault could cause your home or appliances to become 'live' as the current flows to earth. Earth stakes

often do not work because the earth stake is corroded or damaged. Don't risk lives by having a faulty earth in your house. It is best to get your home checked by a qualified electrician.

External Lighting Systems

There are many lighting and heating products to choose from. If you are in doubt about installing your new lights or heating in your home, call us to get advice on installation. If you are thinking about getting external lighting then you may need special wiring to the outside of your building. Whatever lighting you are installing or removing from your house or garden it is always advisable to talk it through with a qualified electrician. This could save you time and money.
