An Electrical Installation Condition Report (EICR)

As a landlord in Scotland, you are legally required to ensure the electrical installations in your rental properties are safe and inspected by a qualified person at least every 5 years, with a report (EICR) provided to tenants. An EICR aims to ensure the electrical installation is safe for continued use, identifying any damage, deterioration, or defects that could pose a risk. As a qualified electrician, John Noble can conduct your landlord EICR, inspecting and testing various aspects of the electrical system, including wiring, consumer units, sockets, switches, and protective bonding.
