What Our Clients Say

Electrical Installation FAQs

What electrical installation services do you provide?

We carry out a wide range of electrical installation services including lighting installations, consumer unit upgrades, additional sockets, rewiring, outdoor power supplies, commercial installations, and more.

Do electrical installations need certification?

Yes. Many electrical installation projects require testing and certification to demonstrate compliance with current wiring regulations and building requirements.

Can you install electrical systems in new builds and extensions?

Absolutely. We regularly work on new build properties, extensions, renovations, and refurbishment projects, providing complete electrical installation services from start to finish.

How long does an electrical installation take?

The timescale depends on the size and complexity of the project. Smaller installations may be completed within a day, while larger projects such as rewires or commercial fit-outs can take longer.

Can you upgrade old electrical systems?

Yes. We can assess your existing installation and recommend upgrades to improve safety, efficiency, and compliance with current regulations.

How Much Do Electrical Installations Cost?

The cost of electrical installation work depends on the scope of the project, property size, access requirements, and materials required.

Factors Affecting Cost:

- Size of the installation project
- Number of circuits required
- Lighting and power requirements
- Consumer unit upgrades
- Property access and cable routes

-
- Testing and certification requirements
